The mac binary file requires the following dynamic libraries:
libiomp5.dylib
libc++.1.dylib
libSystem.B.dylib

The last two should have already been available in your mac OS, while the last can be installed using homebrew like,

brew install clang-omp

Please make sure the path has been added to DYLD_LIBRARY_PATH. If not, you may try the following command in your terminal.

export DYLD_LIBRARY_PATH=${your_libiomp5_pyth}:$DYLD_LIBRARY_PATH

The paths of required libraries in my machine are

/usr/local/opt/libiomp/lib/libiomp5.dylib
/usr/lib/libc++.1.dylib
/usr/lib/libSystem.B.dylib
